

UPGRADE YOUR CLAAS LEXION WITH A REDEKOP MAV CHOPPER

Redekop's Maximum Air Velocity (MAV) Straw Chopper is a breakthrough in crop residue management. The MAV's revolutionary design uses two separate zones; one for cutting and the other for spreading, rather than a traditional rotor design that depends on the cutting blades to also spread the straw. This unique design allows the Redekop chopper to maximize the spread performance of your combine while delivering the finest residue cut in the industry.

BENEFIT:	DESCRIPTION:
SUPERIOR CUTTING CAPABILITY	An 8 row rotor (96 blades for the 1420mm body or 116 blades for the 1700mm body) offered for 500 & 700 Series Combines, delivering premium cutting performance & residue management capability in the toughest conditions.
WIDER MORE EVEN SPREAD	Redekop's MAV system allows you to spread your straw evenly across the width of your cutter bar, eliminating the need for the Hydraulic Second Stage Spreaders or heavy harrowing. With the optional wide spread kit, you can spread up to 45 feet.
SUPERIOR BLADES	Carbide coated self-sharpening reversible blades. This gives you a longer lasting blade with better performance versus the factory blades.
TIGHT KNIFE SPACING	The MAV knifebar is spaced at 1" increments providing you with a finer cut over the factory chopper
BREAKAWAY KNIFE BAR	The knife bar is designed to "break away", helping to reduce blade damage when foreign objects pass through the chopper
EASY TO INSTALL	Approximately 1/2 a day for a complete install.
COMPATIBLE SYSTEM	All existing Claas Lexion drive parts and shielding are compatible with the Redekop MAV Chopper
