

CUTTING

SPREADING

UPGRADE YOUR MASSEY WITH A REDEKOP MAV CHOPPER

Redekop's Maximum Air Velocity (MAV) Straw Chopper is a breakthrough in crop residue management. The MAV's revolutionary design uses two separate zones; one for cutting and the other for spreading, rather than a traditional rotor design that depends on the cutting blades to also spread the straw. This unique design allows the Redekop chopper to maximize the spread performance of your combine while delivering the finest residue cut in the industry.

BENEFIT:	DESCRIPTION:
SUPERIOR CUTTING CAPABILITY	8 rows (116 blades) of cutting capability, delivering premium residue management capability in the toughest conditions.
WIDER MORE EVEN SPREAD	Redekop's MAV system allows you to spread your straw and chaff evenly across the width of your cutter bar. With the optional wide spread kit, you can spread up to 45 feet.
SUPERIOR BLADES	Carbide coated self-sharpening reversible blades. This gives you a longer lasting blade with better performance versus the factory blades.
DURABLE DESIGN	Robust bushing and blade geometry eliminating the potential for cracking associated with the factory design.
EASY TO INSTALL	Less than three hours to do the install as we utilize the current factory mounting points.
OPTIONAL - TAILBOARD CONTROLLED ACTUATOR	An add-on option: The split tailboard on the Redekop MAV system enables individual adjustments to be made for crop density & cross winds from the combines in-cab display.
